Document Generation  
Document Design, Presentation, Delivery and Management

## IBM System i, AS/400 Users

Upgrade for Adobe®, JetForm® Central, R-Forms and FormsPlus/400 Users

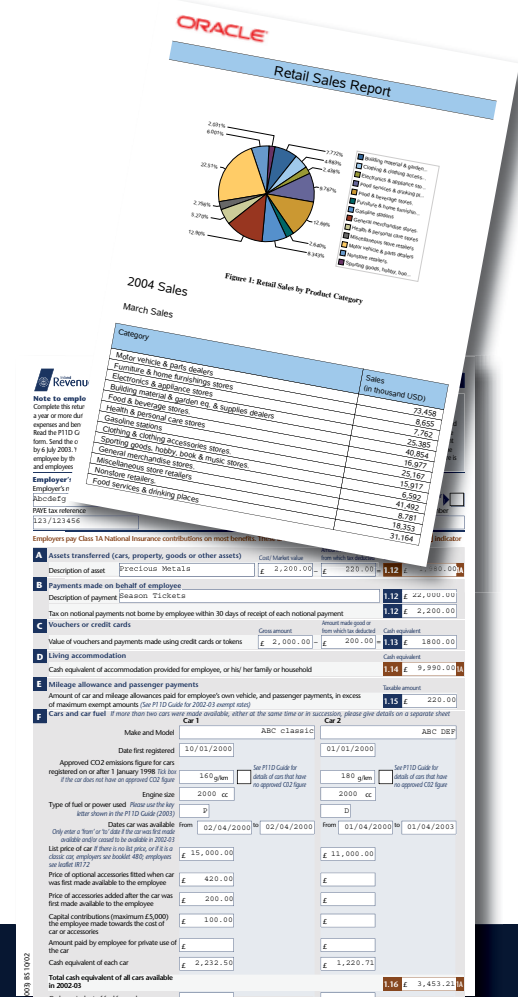

With iForMagine, you can run your JetForm-Adobe Central on the IBM i OR AS/400

**iForMagine** is a document generations solution for IBM Midrange Systems, used for generating professional-looking, high-quality documents from existing legacy line-of-business applications.

The GUI Designer and Transformation features create business documents quickly and easily, regardless of the application software producing the data.

With **iForMagine**, organizations can generate documents that maintain their professional brand and communicate more effectively with customers, partners, and suppliers.

**iForMagine** is the result of 27 years of product enhancements, innovations, and customer's recommendations.

## Document Generation

Design • Presentation • Merge • Deliver • Archive

**iForMagine** is a powerful document generation solution; the enhanced version 3.1 was released in September 2010. Designed with the power and flexibility to deliver documents for every industry, **iForMagine** works with any data generated on the System i or AS/400. Based on the designer and merge engine of Adobe Systems Inc. **iForMagine** runs natively on your System i or AS/400 but can also merge document from Windows, Linux, and UNIX systems. Data generated from any business software is dynamically and logically merged into documents or forms to create personalized and professional output which can be delivered without operator intervention. Your documents can be delivered by print, email, fax, web, and be archived using our content management system or yours.

### POWERFUL • SCALABLE • GLOBAL

**iForMagine** has proven scalability with global multinational companies like GE, Honda, and Zenith. More than 10,000 companies use the merge engine used in **iForMagine**. A powerful, flexible, and scalable solution, **iForMagine** is designed to handle small business or multinational global enterprises.

### Languages Supported

In a global, competitive business environment, documents must be created and delivered worldwide. A document must meet the legal and technical requirements for the location in which it is distributed. A global corporation managing multiple businesses and operating in multiple languages can have hundreds of requirements for a single document. For effective communication, documents

should be tailored to the recipients and presented to them in their native languages in an intuitive view.

**iForMagine** supports the needs of organizations around the globe and can generate documents in English, French, German, Swedish, Spanish, Italian, Finnish, Norwegian, Danish, Portuguese, Czech, Polish, Hungarian, Russian, Simplified Chinese, Traditional Chinese, Korean, and Japanese.

### Integration without modification

**iForMagine** uses your data to drive the logical and dynamic creation of the document. No modification to your line of business software is required to generate the dynamic presentation of your document or meet the delivery requirements your customers demand. Using the data in your spool file or XML, your documents will be delivered when you want them, where you want them, presented the way you want them.

About  
**iForMagine**

**iForMagine** is the result of 27 years of product enhancements, innovations, and customers' recommendations. The developers delivered their first IBM Midrange e-forms and document generation solution in 1982, followed by a 26 PPM e-Forms Laser Printer for the IBM system in 1987. In 1992, the first AS/400 e-Forms solution with a GUI designer was introduced, and in 2009 the newest document generation software **iForMagine** was released, with the superior level of enhancements that **iForMagine** customers have come to expect..

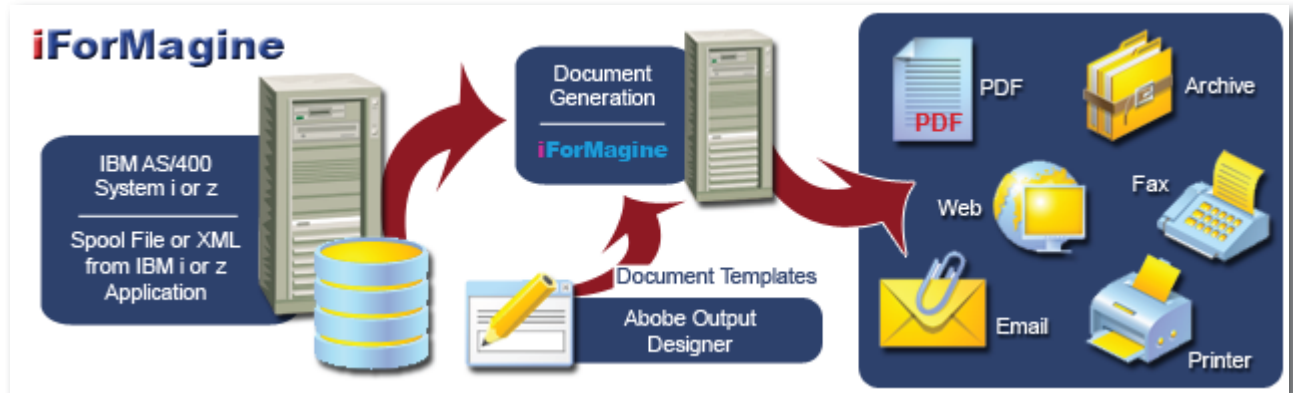

## Professional Presentation

With **iForMagine**, organizations can generate documents that maintain their professional image and communicate more effectively with customers, partners, and suppliers. In many cases, invoices, purchase orders, contracts, and shipping documents are a company's only touch point with their customers, business partners, and other key audiences. **iForMagine** helps ensure that business documents clearly convey valuable information and reinforce an organization's image and brand.

## Web Delivery Saves Trees, Toner, \$\$

Everyone wants to help the environment and leave a better place for our children to live. Delivering documents via email and the web helps save the environment. This combined with "**Intelligent Document Reduction®**", **IDR®** can save you thousands of dollars and countless trees. **IDR** can reduce the number of pages required to represent your information by 33 to 66% when generating traditional multipage documents. **IDR** eliminates the fixed headers and footers generated by most lines of business software packages. Reducing the number of pages presented; reduces paper, toner, and printer maintenance costs when you print, and bandwidth and storage space when transmitting and archiving documents.

## The Components of iForMagine

**iForMagine** Server automates document output processes by executing several agents that perform individual tasks, as shown above. **iForMagine** is installed on the IBM system and includes Adobe Central Pro and Output Designer. The developers delivered their first e-forms solution on an IBM System 36 in 1982. In 2005, they combined their knowledge of the IBM Midrange system with the power of Adobe document generation to deliver a native user interface for the IBM i and AS/400. All user configurations for **iForMagine** are performed natively on your IBM system. Adobe Central is one of the most widely used production document generation solutions in the world which is why the developers combined their knowledge of the IBM midrange systems with the globally proven e-forms technology developed by Adobe.

### Dynamic, Personalized Document Generation

**iForMagine** helps improve service and increase customer retention by giving customers easy-to-understand, professional documents in their preferred format. The logical and dynamic document features in **iForMagine** allow application data to control the look

and feel of each document. The Variable Data Printing (VDP) included in **iForMagine** provides personalized messaging in documents, promoting successful up-selling and cross-selling of your products and services.

### Transforming Business Information Into Effective Documents

Today's enterprises are discovering that documents can do much more than just communicate and inform. Compelling documents generated with VDP produce high-quality personalized documents — such as one-page invoices and web-delivered 1,000+ page user manuals — which can actually drive new business and generate increased revenue. Targeted marketing programs rely on brochures and other documents created for highly specific audiences. Documents generated using VDP can help build customer satisfaction and loyalty. The key to producing documents that drive business is a document generation solution that takes content from multiple sources, dynamically generates documents, and then delivers documents via print, email, smart phone, and the web. Anywhere, anytime, anyway your customer wants it.
